

# REDEFINE NATURAL

At Urban Green Energy we have always looked to brighten your day by providing innovative products for a more sustainable future. With our hybrid wind and solar powered street lamp we're looking to brighten your night as well!

## The **SANYA**<sup>TM</sup> HYBRID STREET LAMP

Sanya redefines the meaning of natural light. Our environment produces vast amounts of natural energy. Let's show our environment we care - give a little back to nature, reduce the usage of fossil fuels, save money, or do all simultaneously with Sanya.

With the UGE Sanya street lamp, installation is always quick and affordable. It's as easy as pouring a foundation, assembling the system, and flipping the switch! The Sanya is ideal for a variety of applications, such as roads, resorts, bridges, and parking lots.

Rather than offering only one design option, we will customize your hybrid wind/solar street lamp to fit your application. Custom logos and designs can be added to the Sanya to create a powerful marketing tool for your company.

Contact one of our representatives today to discuss how Sanya can work for you!

## WIND ENERGY

Turbine	UGE-600 VAWT
Rated output	600W
